SOLUTIONS FOR DEVELOPING SPEED AND STRENGTH FOR THE BASKETBALL TEAM OF THE UNIVERSITY OF MINING AND GEOLOGY

- Incorrect contact point or improper coordination between legs and arms.
- Unstable starting position or rushed execution.

Selected Supplementary Exercises:

1. **Toss and Catch:** Practicing ball control and catching at the correct contact point.
2. **Wall Passing:** Developing wrist strength and rhythm.
3. **Partner Drills:** Passing back and forth to improve spatial awareness.
4. **Distance Variation:** Passing over the net while gradually increasing the distance.

III. Conclusion and Recommendations.

1. Conclusion: For students at the University of Mining and Geology, when first learning the overhead pass technique, correctly identifying the basic weaknesses and the causes affecting the ability to perform that technique is an important basis for finding solutions to improve training effectiveness.

Performing supplementary exercises and technical drills is especially important in helping trainees quickly improve their overhead passing skills in volleyball.

2. Recommendations.

Based on the report's findings, it is suggested that volleyball teachers continue to apply these exercises to new volleyball students to improve learning effectiveness and further confirm the effectiveness of the selected exercises.

A DESCRIPTIVE CORPUS-INFORMED STUDY**

Abstract

This study presents a descriptive and corpus-informed analysis of compound verbs in contemporary English. Drawing on established lexical items documented in major dictionaries and morphological literature, the study examines structural patterns and semantic properties of compound verbs. The analysis proposes a six-category framework based on constituent structure and semantic behavior, including verb–verb, noun–verb, adjective–verb, idiomatic compounds, semantically dual compounds, and verb-forming compounds derived from non-verbal bases. Findings indicate that compound verbs vary significantly in productivity and lexical transparency, with noun–verb compounds emerging as the most productive and semantically
